

## FG20B02

### Material

316 Stainless Steel  
(PPA piston)

**How it works** A fluid flow through the sensor causes precise displacement of magnetic piston and closes an electrical contact (reed switch).

### Details

- On/Off output; NO (SPST) working;
- Detects increased or decreased flow;
- Sensitivity adjustment<sup>1</sup>.

### Typical applications

- Lubrication and cooling systems monitoring;
- Pipe fluid flow monitoring.

### Liquids

- Clean water, oils, lubricants and filtered fuels<sup>2</sup>.

**Liquids with magnetic particles** will cause deposition / magnetic sedimentation and it will prejudice the operation of the sensor. Use magnetic filter before the sensor.

**Liquids with encrustation particles and/or solids** require tests.
